Re: Permit No. 02-47-0108
Lorain Works

Dear Mr. Crepeau:

On August 15, 1983 United States Steel Corporation's Lorain Works received a request for Part B of the permit application for its hazardous waste facilities covered by interim status ID No. OHD 004 222030. On February 8, 1984 U. S. Steel responded to the request, indicating it would close its landfill (D-2), and would operate those facilities previously classified as storage facilities under the 90-day accumulation provision of 262.34 (OAC-3745-52-34). A revised closure plan for the landfill was submitted on March 20, 1984.

It is our understanding that prior to placing the former storage facilities into service as temporary accumulation areas, some "closure" must occur, i.e., all waste materials must be removed from the facility, and the emptied facility must be certified as closed. The attached, revised closure plans describe how U. S. Steel will comply with this requirement for those facilities to be converted to 90-day accumulation sites.

In addition, it revises the previous closure plans for the S-12 and S-22 storage sites which will no longer be used for hazardous waste management.

If you have any questions, please call.

Sincerely,

General Superintendent
